

WR 1703161054

This WR, along with the Content Update available on the 1923.28 update, puts the sections in place for Structured Documentation in PhysDoc. When sites have the installer ran to get the most recent Evident Content update, they will be able to build the Structured Documentation sections in Phys Doc for Quality Measures. WR 1610140837 created this functionality; this WR just put the sections into place now that Content Services has built them. The available sections are:

- Acute MI
- Comfort Measures
- Delivery Questions
- Diagnostic Studies and Labs
- ED and IP Times
- Education Refusal
- Falls
- Functional Status Assessments
- Immunizations
- Newborn Questions
- Stroke Discharge
- VTE Prophylaxis

This WR added the document to the Virtual Chart launch for CQM Documentation. When this launch is selected, the sections built by Content Services for Quality Measures will display (given that the site has the Content Update on the 1923.28 update in place). WR 1708071603 created this functionality; this WR just put the document into place.

This WR also enable reflexing within the CQM Sections from the Virtual Chart launch.

WR 1710090907

This WR adds additional sections to Structured Documentation in Phys Doc and to the Virtual Chart launch to CQM Documentation. These sections were created during the most recent Evident Content update that went out on the 1923.30 update.

For 1923, the following sections were added:

- VTE Risk Level
- Newborn Hearing Screening

For 2000 and 2001, the following sections were added:

- VTE Risk Level
- Newborn Hearing Screening
- Acute MI Procedure Times**
- Stroke Medications**
- VTE Prophylaxis Medications**
- VTE Risk Procedure Times**

**Denotes sections that will not contain any questions. Content Services will complete the questions in 2000.

For ALL releases, the following section was REMOVED:

- ED and IP Times

NOTE: *The Evident Content updates on 1923.28 and 1923.30 will need to be installed on sites and the installer ran before users will have access to the questions in those updates. Users will get a message that they need to install content when they try to access these sections if their content is not up to date.*
