

Once Notes 2.8.0 has been loaded, notes requiring a signature will no longer display within the user's notes task folder. A new access point called Notes Task List will be available. Once selected, the new Task List will display. The user will see all the Notes in a single location where they are able to view multiple notes on different patients. Users who do not require a cosignature will also be able to easily select and sign multiple notes at one time.

## Accessing the Notes Task List

From Tasks, the user will now select **Notes Task List** to access their Task List.

Notes may be previewed by selecting the checkbox next to a note or by selecting the note itself. When viewing a note in the preview panel the options available are the same as they are when previewing a note from the Note List in the Notes application. When a note is viewed it will display in a yellow highlight. If several notes are viewed the last note viewed will display with a yellow highlight.

## To Complete a Batch Sign

Users that do not require a cosignature will be able to batch sign and will see checkboxes in front of the Notes. Selecting the check box will allow them to sign multiple Notes at once. Draft Notes that are missing a Note Type will not display with a check box.

As notes are selected the row for the selected note will display in blue. When at least 2 check boxes have been selected the Sign Selected option will become available.

Once selected, a green success message will display to let the user know that all notes with their checkbox selected were successfully signed. Notes signed will be removed from the listing. If a note is selected containing an anchor or empty list phrase, a notification will display alerting the user that the remaining Notes highlighted (in blue) in the Task List need correction before signing.

To correct a note remaining in the blue highlight select **Edit** to address the anchors and/or empty list phrases. Then select **Sign**. If more than one note needs to be corrected a second batch sign may be performed.

## **Cosigning a Note**

Users that require a cosignature (or multiple cosigners) will need to edit the Note and then complete the cosign process. This process is the same as signing a note within the Notes application.

## **Covering Providers**

Users that have Login Associations setup will see the users they are covering within the Covering For dropdown. Selecting the checkbox next to a user will add that user's unsigned notes to the logged-in user's Task List. Once the user signs the notes they will be removed from both the covering user and the assigned user's Task List.
