

This document outlines the required security for accessing the HIM Coding Worklist, explains how to use the worklist, and provides instructions to utilize coding statuses. The HIM Coding Worklist offers a streamlined and effective solution for coding patient accounts. It displays a list of accounts that need to be coded. From this list, accounts can be selected, and the patient chart options will be displayed (e.g., Patient Summary, Diagnosis, and Procedure screens).

HIM Coding Worklist Security

Security setup is necessary for a user to access the HIM Coding Worklist. Users will need the Application rule specified below.

Application Rule

Health Information Management

NOTE: Security access for these Applications and Behavior Controls may be granted in System Administration for specific logins or may be given to a group of users in a specific Role.

Using the HIM Coding Worklist

Accounts initially displayed on the worklist will meet the following criteria:

- Have a Discharge Date
- No Contract Code
- No Medical Records Finish Date
- Total Charges Greater than \$0

Select Web Client > Application Drawer > HIM Coding Worklist

Additional parameters may be entered to filter the displayed accounts. The following options are available:

• Admit Date: Displays accounts admitted within a specific date range.

TruBridge®

- **Discharge Date**: Displays accounts discharged within a specific date range.
- **Chart Location**: Displays accounts that are currently assigned to a specific Chart Location via the Chart Location application.
- **Coding Status**: Displays accounts assigned to a specific Coding Status. A Coding Status may be entered using the Edit option on the Patient Summary screen. (see details below)
- Search (Enter Visit ID or Name): Specific charts may be searched using an account number or patient name.
- Included Accounts Without Discharge Date: The worklist will default to only display accounts that have been discharged. Select this option to show accounts that have NOT been discharged.
- Included Accounts With \$0 Charges: The worklist will default to only display accounts that have an account balance greater than \$0. Select this option to show accounts that have a \$0 balance.
- Visit Filters: This feature uses the Filter Builder tool to create additional filters. For example, filters may be set up to display accounts with a specific Stay Type, Service Code, or Financial Class. The user will need the appropriate Filter Builder security in System Administration to be able to create and add filters to this screen. For more information, please see the additional documentation on Filter Builder.

Once accounts are displayed, the following information will be available for each account.

- Account Number/Patient Name/Medical Record Number/Admit Date/Discharge Date/Stay Type/Subtype/Service Code/Financial Class/Attending Physician: Pulls from Registration and ADT screen.
- Account Age: Pulls the number of days since discharge.
- Total Charges: Pulls the total charges from the account detail.
- Chart Location: The current location assigned to the patient's chart.
- Coding Status: The current coding status assigned to the patient's chart.
- Coding Status Changed Date: The date that the current coding status was assigned to the patient's chart.
- **Coding Status Elapsed Time**: The time that the current coding status has been assigned to the patient's chart.

Select a specific account from the worklist to display the patient's Chart.

- **Description**: Enter the description of the Coding Status.
- Active: When selected the status will be active and may be assigned to a patient's chart. When not selected, the status will remain in the Coding Status table under the Inactive list.
- Last Updated by/Last Updated Date/Time: Displays the user that last made changes to this coding status, and the date/time the change was made.

Select Save after making any changes.

A Delete option is available; this will allow a status that has not been assigned to an account to be deleted. If a status has been assigned to an account, the Active option may be unchecked to deactivate the status and keep it from being used in the future.
