

**What is Patient Data Console?**

- Patient Data Console is a customizable and dynamic workspace that contains relevant and vital patient information for every care setting with the ability to take meaningful action at the point of care. Patient Data Console will display board(s) with a library of cards to display the patient's information. A users' board may be set up to streamline their workflow and display information that is pertinent to the patient.

**How do I access Patient Data Console?**

- Web Client is required to access and use Patient Data Console. From the patient chart, select Console from the navigation menu.

**Is Patient Data Console a purchased application?**

- Patient Data Console does not require a separate purchase.

**Can I share my board with other users?**

- With the proper behavior controls assigned, users can share their boards with other users.

**Can anyone make a board public?**

- Users/Roles can be assigned behavior controls that would grant them the ability to make their own boards public for other users to see/use.

**Is there an admin control for Patient Data Console (ability to create/assign boards for other users)?**

- Users/Roles can be assigned a behavior control that would grant them full administration access to add, edit, and remove boards.

**Is Patient Data Console view only?**

- Data set cards are view only, but Specialty cards are interactive and allow information to be added, edited, or viewed. Please see the [Patient Data Console](#) user guide for more information.

**Can any user with access to the Patient Data Console application add, edit, or remove data within the Specialty cards?**

- Behavior controls can be used to grant view only access to information within Patient Data Console. Please see the [Patient Data Console](#) user guide for more information.
